**Add sensitive information filters**

Add sensitive information filters

On the **Add sensitive information filters** page, configure filters to block or mask sensitive information.

1. In the **PII types** section, configure the personally identifiable information (PII) categories to block or mask. You have the following options:

   ○ To add a PII type, choose **Add a PII type**. Then, do the following:

     a. In the **Type** column, choose `Email`.

     b. Guardrails can either `Block` or `Mask` responses based on the **Guardrail behavior** specified. For the `Email`, choose `Mask` as the behavior.

   ○ Next, click on **Add new PII**, add an additional PII type for **Credit/Debit card number**. For the **Guardrail behavior** select `Block`.

                                                                       🗑

Add new PII

2. You can also add up to 10 regex patterns to filter custom types of sensitive information and specify the desired guardrail behavior. You can leave this blank for the workshop.

3. When you are finished configuring sensitive information filters, select Next.

                                                        Previous   Next
